Dandi Nageswar

Senior DevSecOps Engineer | Kubernetes & CI/CD Security | Cloud-Native Security

Hyderabad, India | +91 95029 58881 | nageswar.dandi@gmail.com

PROFESSIONAL SUMMARY

Senior DevSecOps Engineer with 10+ years of experience architecting, securing, and automating enterprise CI/CD pipelines and application delivery platforms. Skilled in Jenkins, Tekton, Argo CD, Helm, and uDeploy. Integrates shift-left security (SAST, SCA, DAST, and container image scanning) using Checkmarx, SonarQube, OWASP ZAP, and Trivy. Deploys and secures applications on Kubernetes, OpenShift, GKE, and AWS EC2, with hands-on experience across AWS and GCP. Automated 20+ SOC tasks using Python and REST APIs, saving the SOC team 20–25 hours per day. Experienced in SRE observability, JVM tuning, and performance troubleshooting. Certified Kubernetes Administrator (CKA).

TECHNICAL SKILLS

CI/CD & GitOps: CI/CD Pipelines, Jenkins, Tekton, Argo CD, Helm, GitLab CI, IBM UrbanCode Deploy (uDeploy), Blue/Green Deployments, Canary Deployments

DevSecOps & Security: Checkmarx (SAST), SonarQube, SonarLint, OWASP Dependency-Check (SCA), OWASP ZAP (DAST), Trivy, GitLeaks, Falco, Kyverno (Policy as Code), CI/CD Quality Gates, Vulnerability Management, CVE Remediation

Security Practices: DevSecOps, Shift-Left Security, Threat Modeling, SAST, SCA, DAST, Container Security, Incident Response, Secrets Management, SOC Automation, SIEM, SOAR, mTLS, TLS/SSL, Disaster Recovery

Containers & Orchestration: Kubernetes, OpenShift, Docker, Docker Swarm, Buildah, Istio, RBAC (Roles, RoleBindings), NetworkPolicies, Microservices

Cloud: GCP (GKE, Compute Engine, GCS, IAM, VPC, Subnets, Firewall Rules, Secret Manager); AWS (EKS, EC2, IAM, S3, Secrets Manager, VPC, Subnets, Security Groups)

Infrastructure as Code (IaC) & Scripting: Terraform, Ansible, Python, Groovy, Shell Scripting, Linux

Observability & Logging: Prometheus, Grafana, AppDynamics, Splunk, ELK Stack (Filebeat, Kafka, Logstash, Elasticsearch, Kibana)

Security Automation & AI: TheHive SOAR, Custom Responders, Custom Analyzers, REST APIs, SentinelOne, Proofpoint, Cisco Umbrella, MCP Server, Retrieval-Augmented Generation (RAG)

Build, Artifacts & Servers: Maven, JFrog Artifactory, Apache, Tomcat, Oracle WebLogic, JBoss, IBM WebSphere, Memcached, OpenSSL, Java Keytool, JVM Tuning

PROFESSIONAL EXPERIENCE

Cyber DevSecOps Engineer | Oct 2024 – Present

Garmin Technologies, Hyderabad

- Architected Tekton CI pipelines and Argo CD GitOps workflows with Helm to automate consistent application deployments on Kubernetes.
- Migrated SOAR (Security Orchestration, Automation and Response) applications from on-premises Docker Swarm to Kubernetes, hosting some workloads on Garmin's private cloud and others on Google Kubernetes Engine (GKE), improving scalability, resilience, and operational flexibility.
- Automated 20+ repetitive SOC tasks using Python, REST APIs, Responders, and Analyzers, saving the SOC team approximately 20–25 hours per day and freeing analysts for higher-priority investigations.
- Developed custom TheHive responders and analyzers in Python that integrate multiple security tools, including SentinelOne, Proofpoint, and Cisco Umbrella, through REST APIs, enabling automated enrichment and response actions for SOC cases.
- Stabilized the TheHive SOAR platform by analyzing application logs and tuning JVM heap and garbage collection (GC) parameters, reducing recurring memory and performance incidents.
- Engineered centralized SIEM logging with the ELK Stack (Filebeat, Kafka, Logstash, Elasticsearch, Kibana) for reliable log ingestion, analysis, and real-time monitoring.
- Strengthened Kubernetes container security with image vulnerability management and Falco runtime threat detection.
- Participated in threat modeling discussions with development and security teams to identify risks, attack surfaces, and mitigations for SOAR and Kubernetes-hosted applications.
- Implemented Kyverno policies as code to enforce Kubernetes security standards and guardrails on workloads deployed through the GitOps pipelines.

- Enforced CI pipeline quality gates using SAST, SCA, and container scan results to block builds that miss security thresholds.
- Developed an MCP server for TheHive SOAR that enables AI-driven automation to create alerts and cases and run responders through TheHive APIs.
- Built a Retrieval-Augmented Generation (RAG) system for security incident resolution that retrieves troubleshooting documentation and summarizes recommended resolution steps for SOC teams.

Lead Analyst | Feb 2022 – Oct 2024
CGI, Hyderabad
- Transitioned CI/CD pipelines for Spring Boot applications on OpenShift from Jenkins and uDeploy to Tekton and Argo CD, using Buildah and Helm.
- Integrated SAST and SCA (Checkmarx, SonarQube), container scanning (Trivy), and DAST (OWASP ZAP) to remediate vulnerabilities across the delivery lifecycle.
- Enabled encrypted service-to-service communication across microservices by adding Istio mTLS and peer-to-peer authentication to deployment pipelines.
- Remediated CVE dependency vulnerabilities in Spring Boot applications by upgrading Netty, SnakeYAML, Spring Framework, Jackson, Log4j, and Tomcat while maintaining compatibility and stability.
- Deployed Tekton and Argo CD on Google Kubernetes Engine (GKE) to automate client application deployments.
- Configured Prometheus and Grafana monitoring on OpenShift, creating Roles, RoleBindings, and NetworkPolicies for secure cross-namespace communication.

Release Engineer | Aug 2021 – Feb 2022
HighRadius Technologies, Hyderabad
- Authored Jenkins Declarative Pipelines in Groovy for CI/CD automation and administered Jenkins user access and permissions.
- Diagnosed intermittent Tomcat request failures, traced the root cause to Memcached, and tuned its parameters to improve application stability.

System Operations Analyst | Jan 2019 – Aug 2021
Wells Fargo, Hyderabad
- Designed Jenkins and IBM UrbanCode Deploy (uDeploy) CI/CD pipelines that automated Maven builds, Docker image builds, and JFrog Artifactory artifact management, and deployed applications to AWS EC2 instances across Linux and Windows environments.
- Embedded DevSecOps controls into CI/CD pipelines using Checkmarx and SonarQube (SAST, SCA) and Trivy (container scanning) to fix security issues before deployment.
- Streamlined application health checks with Python automation, cutting execution time by approximately 83% (from about 3 hours to 30 minutes per cycle).
- Automated application patching and maintenance using Ansible and Shell scripting, reducing patching effort by about 65% (roughly 6 hours down to 2 hours per maintenance cycle) while improving consistency across servers.
- Established SRE observability with AppDynamics and Splunk, creating custom dashboards, metrics, and alerts for faster incident detection.

Systems Engineer | Jun 2015 – Jan 2019
Tata Consultancy Services (TCS), Hyderabad
- Executed the full vulnerability management lifecycle (identify, track, remediate, validate) for Apache, Tomcat, Oracle WebLogic, JBoss, and IBM WebSphere applications.
- Upgraded and patched application servers to remediate CVEs and maintain secure infrastructure.
- Renewed and deployed CA certificates with OpenSSL and Java Keytool to ensure secure TLS/SSL communication.
- Conducted Disaster Recovery (DR) testing and configured reverse proxy and software load balancing for high availability.
- Troubleshot JVM memory and GC issues by analyzing logs and heap dumps and tuning heap and GC parameters.

EDUCATION

B.Tech in Computer Science | Jun 2011 – May 2015 | 82% (CGPA converted to percentage)
RGUKT Basar, Basar

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | The Linux Foundation (CNCF) | Credential ID: LF-0n8i501iap
